- Continuous Commercial Service.
- Intermittent Commercial and Amateur Service.
- Subject to wide variations as explained on sheet TUBE RATINGS in General Section.
- ▲ At crest of audio-frequency cycle of sine-wave form.
- Modulation essentially negative may be used if the positive peak of the audio-frequency envelope does not exceed 115% of the carrier conditions.
- ▲▲ obtained from fixed supply, by grid resistor (2500, 3000, 3000) or by cathode resistor (420, 500, 600).

NOTE: When the 809 is used in the final amplifier or a preceding stage of a transmitter designed for break-in operation and oscillator keying, a small amount of fixed-bias must be used to maintain the plate current at a safe value. With a plate voltage of 1000 volts, a fixed bias of at least -10 volts should be used.

Data on operating frequencies for the 809 are given on the sheet TRANS. TUBE RATINGS vs FREQUENCY
